Streamline code merging for ChatGPT across large codebases, with token context in mind.

Manually copying and pasting code snippets is tedious. CodeFusion allows you to easily select and merge specific code files across your codebase into a single, cohesive prompt block so that you can stay within ChatGPT's token context budget.

Why use CodeFusion?

- Time-Saving:** Skip manual code merging and get to work with ChatGPT faster.
- Optimized for Token Limits:** Focus on the code that's relevant to your ChatGPT query, ensuring it fits within the allowable token context.
- Error Reduction:** Minimize the potential for mistakes introduced during manual copy-pasting.
- Efficient Workflow:** Maintain a smooth workflow by seamlessly preparing code for ChatGPT.
