<div>Member</div> <div>Registered: 2014-12-03</div> <div>Posts: 51</div> <div>Offline</div>	<p>I would like to utilize a Brother DSmobile 620 document scanner in Xfce 4.10. To that end, I downloaded the <a href="#">manufacturer's drivers</a> as rpm, extracted via <i>rpmextract.sh</i> and copied the driver files to the respective root directories (etc, lib, usr). Thereafter, I installed sane 1.0.24. Upon plugging in the scanner, it is not recognized by <i>sane</i>.</p> <pre>lsusb   grep Brother Bus 001 Device 004: ID 04f9:60e0 Brother Industries, Ltd sudo sane-find-scanner\ # ... # No USB scanners found. If you expected something different, make sure that # you have loaded a kernel driver for your USB host controller and have setup # the USB system correctly. See man sane-usb for details. # ... scanimage -L # Only the webcam is identified</pre> <p>Any suggestions on getting this usb scanner to work?</p>

<div>Member</div> <div>Registered: 2014-12-03</div> <div>Posts: 51</div> <div>Offline</div>	<p>After almost one year, I found a solution. (Notice the "a solution", as it merely defers the issue.)</p> <p>Download the <i>Debian</i> package from the <a href="#">manufacturer's website</a> and install it via</p> <pre>sudo dpkg --force-depends -i libsane-dsseries_1.0.5-1_yourArchitecture.deb</pre> <p>Prior to using a sane frontend, load module <i>sg</i>.</p> <pre>sudo modprobe sg</pre> <p><i>Last edited by Michael Gruenstaeudl (2015-12-03 21:00:00)</i></p>
